Heta

We design our wood-burning stoves with insight and respect for craftsmanship

A wood-burning stove must fulfil many needs. It must heat the home, look good in the room and be environmentally sound. And of course on a cold day it must keep you warm and cosy.

For us, design is more than look and style. It is about finding new ways and creating a harmony between form and function. A harmony that means your Heta stove brings pleasure every day for years to come.

Heta A/S is a family-owned, family-run firm. Our company is located in Lemvig in Jutland and designs, develops and manufactures wood-burning stoves. Our manufacturing facilities are ultra-modern and we make our stoves with respect for traditional craftsmanship – a craftsmanship that has always characterised Heta products.

Erik Bach
owner of Heta A/S

Scan-Line Turin Modern

Scan-Line Turin Modern / Classic

The Scan-Line Turin, Napoli and Bologna ranges are based on the Scan-Line 500 range, which offers everything you could ever dream of in a wood-burning stove.

Fitted with the latest combustion technology for high efficiency, and previously unimaginably low levels of CO and particle emissions. User-friendliness is also exceptional, with a very deep firebox preventing ash particles from flying out into the room, including a very large ash bucket with a carrying handle.

To make this product range perfect, Turin, Napoli and Bologna are available in a wide range of different colours. There are an incredible 75 colours to choose from, all produced by one of Germany's best-renowned ceramics factories.

Heta Scan-Line Ancona

- traditional values

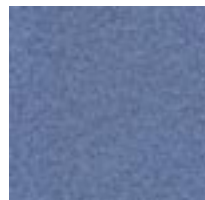

The traditional stove that continues to be a fantastic burner while meeting all the latest standards.

This model is also available in many versions, including stainless steel, enamelled, painted, soapstone-encased, with or without a water tank. And you can choose from 75 different ceramic colours for this oven and its "sister models".

If, after a year or two, you decide to change the décor in your home, you can have the colour scheme of your stove changed as well.

Aqua central heating stoves that look beautiful

The Aqua range from Heta are beautifully-designed wood-burning stoves. The range comprises the traditional Scan-Line Ancona and the more modern Scan-Line Turin Aqua.

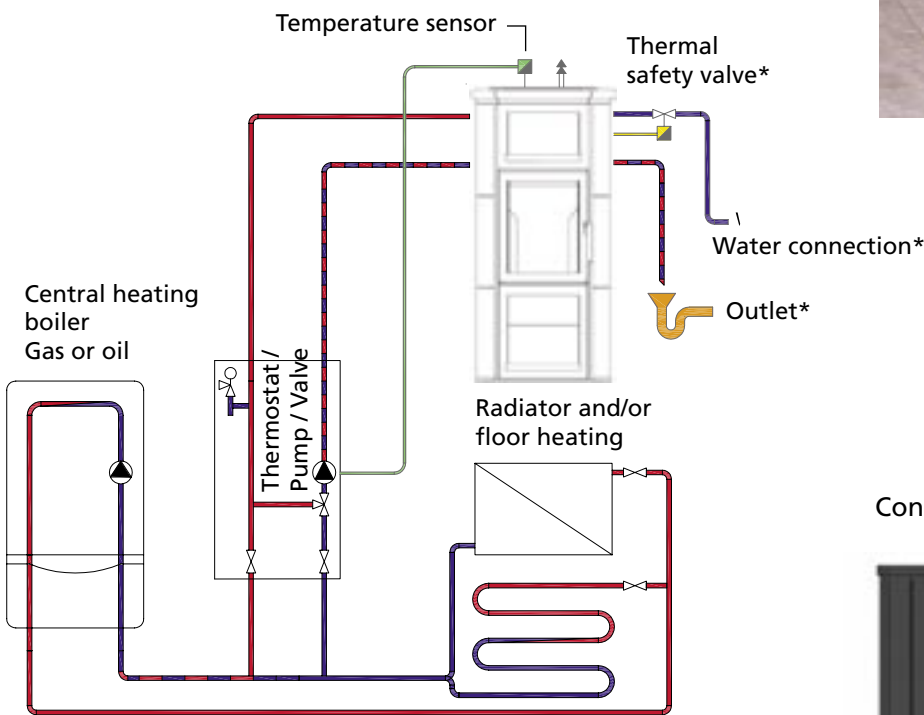

Still wood-burning stoves in every way, these models also include a back boiler that transfer excess heat into your existing central heating system, allowing an adjacent room or the water in your home to be heated.

Both stoves are fully-tested and are excellent investments when used correctly.
